

Kick Stools

Is your kick stool up to the job?

A recent inspection of a plastic kick stool revealed that it had previously been repaired.

The user immediately removed the defective kick stool from use and will remove all plastic stools from his section.

Key messages:

- Ensure kick stools are part of your ladder inspection programme.
- Pay particular attention to plastic kick stools and if it appears that they have been repaired, then remove from use and dispose of them.
- Replace any plastic kick stools in your area with metal ones at the earliest opportunity.
