

STFC SHE Code 40:

NEW**Interlocks****SHE Code 40: Interlocks for
Personnel & Environmental
Protection**

Interlocks are used widely across STFC laboratories providing protection for major safety hazards, for example lasers, radiation and electricity.

This is the launch of a new SHE code, the first for some time, in STFC.

The code was developed to provide a scalable and flexible framework to manage the interlock lifecycle – from design to decommissioning and address small and simple control systems (e.g. temperature control) through to a large science facility.

To find out more BiteSize training for this Code can be found here
